

SAFETY POLICY STATEMENT

At Charleston International Airport (CHS), we have the responsibility to provide a safe working and operating environment for our employees, airlines, tenants and the traveling public. We have developed and will maintain a Safety Management System (SMS) and will devote the time, staff, and resources to establish and improve safety at the Airport. SMS programs succeed when every employee participates by taking safety serious and reporting the hazards observed.

Our goal is to deploy an effective SMS by:

- ▶ Encouraging stakeholder and employee participation at all levels
- ▶ Encouraging safety issue reporting from all employees without fear of reprisal
- ▶ Maintaining a confidential hazard reporting system within the Airport community
- ▶ Providing SMS training, education, and materials to inform all employees, tenants, and contractors about SMS functions, safety responsibilities and communicating clear expectations for safety at CHS.
- ▶ Considering new safety initiatives that reduce safety hazards and new processes that help identify risks.
- ▶ Complying with all regulatory requirements and making safety a priority

We believe that safety is a collective responsibility, and we appreciate everyone's efforts in ensuring the airport is safe and reliable for all.

Thank you for your contributions to the safety of the airport, and for creating an Airport of which we can be proud. Providing our passengers with a safe travel experience is the key to our success.
